Gaps between the contigs are represented as runs of N. but the exact sizes of the gaps are unknown. This record will be updated with the finished sequence as soon as it is available and the accession number will be preserved.

sequencing reads that have not been assembled into
contigs. Runs of N are used to separate the reads
and the order in which they appear is completely
arbitrary. Low-pass sequence sampling is useful for
identifying clones that may be gene-rich and allows
voverlap relationships among clones to be deduced.
* However, it should not be assumed that this clone
* contigs. Runs of N are used to separate the reads
* and the order in which they appear is completely
arbitrary. LOW-pass sequence sampling is useful for
* identifying clones that may be gene-rich and allows
* overlap relationships among clones to be deduced.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              sequencing reads that have not been assembled into contigs. Runs of N are used to separate the reads and the order in which they appear is completely arbitrary. Low-pass sequence sampling is useful for
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            identifying clones that may be gene-rich and allows overlap relationships among clones to be deduced.
                                                                                                                                                                                                                                                                                                                                                                                                                                    BP; 219 A; 256 C; 248 G; 237 T; 0 other;

Runs of N are used to separate the reads and the order in which they appear is completely arbitrary. Low-pass sequence sampling is useful for identifying clones that may be gene-rich and allow overlap relationships among clones to be deduced. However, it should not be assumed that this clone will be sequenced to completion. In the event that the record is updated, the accession number will
                                                                                              Sequence 972 BP; 221 A; 250 C; 268 G; 231 T; 2 other;

* sequencing reads that have not been assembled into

* contigs. Runs of N are used to separate the reads

* and the order in which they appear is completely

* arbitrary. Low-pass sequence sampling is useful for

* identifying clones that may be gene-rich and allows

* overlap relationships among clones to be deduced.

* However, it should not be assumed that this clone

* will be sequenced to completion. In the event that

* the record is updated, the accession number will
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Center code: WIBR

Runs of N are used to separate the reads and the order in which they appear is completely arbitrary. Low-pass sequence sampling is useful for identifying clones that may be gene-rich and allows overlap relationships among clones to be deduced. However, it should not be assumed that this clone will be sequenced to completion. In the event that the record is updated, the accession number will
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          BP; 224 A; 247 C; 243 G; 213 T; 5 other;

Center clone name: 189_G_16

Sequencing vector: Plasmid; n/a; 100% of reads
Sequencing vector: Plasmid; n/a; 100% of reads
Chemistry: Dye-terminator Big Dye; 100% of reads
Assembly program: Phrap; version 0.960731

Consensus quality: 2251791 bases at least Q40

Consensus quality: 229156 bases at least Q30

Consensus quality: 230361 bases at least Q20

Insert size: 241000; agarose-fp

Insert size: 231284; sum-of-contigs

Quality coverage: 11.5 in Q20 bases; sum-of-contigs
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        arbitrary. Gaps between the contigs are represented as runs of N, but the exact sizes of the gaps are unknown. This record will be updated with the finished sequence as soon as it is available and the accession number will be preserved.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            NOTE: This is a 'working draft' sequence. It currently consists of 25 contigs. The true order of the pieces is not known and their order in this sequence record is
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     2200: gap of 100 bp 13332: contig of 1132 bp in length 3432: gap of 100 bp 4992: contig of 1560 bp in length

Runs of N are used to separate the reads and the order in which they appear is completely arbitrary. Low-pass sequence sampling is useful for identifying clones that may be gene-rich and allows overlap relationships among clones to be deduced. However, it should not be assumed that this clone will be sequenced to completion. In the event that
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       BP; 233 A; 237 C; 221 G; 213 T; 0 other;

Anote—"Vector: pawplo; site_1: Not1; Site_2: EcoRI; lst strand cDNA was primed with oligo(d7)17 on 50 mg of DNAse-treated, total cellular RNA obtained from 5,000-10,000 microdisseted prenceplastic cells histologically-determined to be prostatic intrapplithelial neoplasia 2 (PIN2) cells. Double-stranded cDNA was ligated to EcoRI adaptors, 5 cycles of PCR applied to the CDNA with an adaptor-specific primer, and the resulting PCR product subcloned into pample 0 the updc-cloning method (Life Technologies). Average insert size is 600 bp. NOTE: Not directionally cloned. This library was

double-stranded cDNA was size selected, ligated to Eco RI adapters (Pharmacia), digested with Not I and cloned into the Not I and Eco RI sites of a modified pT7T3 vector (Pharmacia). Library went through one round of normalization to a Cot = 5. Library constructed by Bento Soares and M.Fatima Bonaldo. RNA was kindly provided by Dr. Minoru Ko (Wayne State University)."

                                                                                                        A sense primer (AAT63579) and antisense primer (AAT63580) were designed to amplify a 1033 bp sequence of the 3' flanking region of the human CD59 gene, with the introduction of a 5' SacI site and 3' XhoI site. The PCR product was joined to CD59 cDNA contg. exons 2, 3 and 4 plus 667 bp of 3' untranslated region (see also AAT63577-78)
Transgenic animals expressing antigen reducing enzyme and complement inhibitor - used for production of materials suitable for human transplantation having a reduced risk of rejection
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Albumin fusion proteins comprising a therapeutic protein and albumin, useful in the treating immune system disorders (e.g. transplant rejection), blood related disorders (e.g. myocardial infarction) and hyperproliferative disorders
                                                                                                                                                                                                                                                                                                                                                                                                                      Gaps
                                                                                                                                                                                              to produce a CD59 minigene. This minigene was shown to retain biological function when expressed in transgenic pigs and mice. Expression of a complement inhibitor such as CD59 on endothelial
                                                                                                                                                                                                                                                    cells of transgenic animals can provide materials suitable for transplantation to humans, suppressing complement activation and
                                                                                                                                                                                                                                                                                                                                                                                                                    .;

In the treatment, prevention, diagnosis, and/or detection of diseases/disorders such as immune system disorders (e.g. transplant rejection), blood related disorders (e.g. myocardial infarction), hyperproliferative disorders (e.g. childhood acute myeloid leukemia), renal disorders (e.g. childhood acute myeloid leukemia), arrhythmias), respiratory disorders (e.g. non-allergic finitiis), neurological diseases (e.g. Lizheimer's disease), endocrine disorders (e.g. pheocytochroma), reproductive system disorders (e.g. syphilis), infectious diseases (e.g. measles), gastrointestinal disorders (e.g. inrealle bowel syndrome) and wound healing. In the present invention, human serum albumin (HA; see AAM52567) was used to generate fusion
                                                                                                                                                                                                                                                                                                                                                                                     ö
therapeutic protein and albumin. The albumin fusion proteins are useful
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      The invention relates to albumin fusion proteins comprising therapeutic

protein and human albumin (HA). The albumin fusion proteins are useful in the treatment, prevention, diagnosis, and/or detection of diseases, disorders such as immune system disorders (transplant rejection); blood related disorders (myocardial infarction); hyperproliferative disorders (childhood acute myeloid leukaemia); renal disorder (glomerulonephritis); candidovasular disorders (arrhythmias); respiratory disorders (non-allergic rhinitis); neurological diseases (Alzheimer's disorders (syphilis); infectious diseases (measles); gastrointestinal disorders (syphilis); infectious diseases (measles); gastrointestinal disorders (srphilis); infections diseases (measles); gastrointestinal disorders (irritable bowel syndrome) and wound healing. The albumin fusion proteins are also used in the treatment of metastatic renal cell carcinoma, metastatic melanoma, malignant melanoma and HIV (human protein used for engineering the Xho and Cla I restriction sites (into the DNA encoding HA protein in pepto006 plasmid.

Conto the DNA encoding HA protein in pepto006 plasmid.

Note: The present sequence shown in sequence listing of the specification can be at its 3' end.

The invention relates to albumin fusion proteins comprising therapeutic protein and human albumin (HA). Therapeutic protein fused to albumin thave an extended shelf-life. The albumin fusion proteins are useful in the treatment, prevention, diagnosis and/or detection of diseases, disorders such as immune system disorders (e.g. transplant rejection), blood related disorders (e.g. myocardial infarction), hyperproliferative disorders (e.g. childhood acute myeloid leukaemia), renal disorders (e.g. qlomerulonephritis), cardiovascular disorders (e.g. arrhythmias), respiratory disorders (e.g. non-allergic rhinitis), neurological pheocytochroma), reproductive system disorders (e.g. syphilis), infectious diseases (e.g. massles), gastrointestinal disorders (e.g. infiritable bowel syndrome) and wound healing. Nucleic acids encoding them is the syndrome of the sy
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   renal cell carcinoma; cardiovascular disorder, artimicrobial; vulnerary; arrivinal; respiratory disorder; non-allergic rhinitis; antileukaemic; neurological disease; Alzheimer; si disease; endocrine disorder; measles; pheocytochroma; reproductive system disorder; neuroprotective; syphilis; infectious disease; gastrointestinal disorder; wound healing; nootropic; irriteable bowed syndrome; HIV; human immunodeficiency virus infection; cytostatic; antiinflammatory; gene therapy; immunosuppressive; cardiant; antiarthritic; antirheumatic; renal disorder; melanoma; PCR primer; ss.
rejection), blood related disorders (e.g. myocardial infarction) and hyperproliferative disorders -

corresponding nucleic acid sequences. Therapeutic proteins and their corresponding nucleic acid sequences. Therapeutic proteins fused to corresponding nucleic acid sequences. Therapeutic proteins fused to dispanses have an extended shelf-life. The albumin of fusion proteins are useful in the treatment, prevention, diagnosis, and/or detection of diseases, disorders such as immune system disorders (e.g. transplant rejection), blood related disorders (e.g. myocardial infarction), hyperproliferative disorders (e.g. childhood acute myeloid leukaemia, metastatic renal cell carcinoma, metastatic metastatic renal cell carcinoma, metastatic metastatic spiral disorders (e.g. arrhythmias), cegin giomerulonephritis), cardiovascular disorders (e.g. arrhythmias), respiratory disorders (e.g. non-allergic rhinitis), neurological diseases (e.g. Alzheimer's diseases), endocrine disorders (e.g. syphilis), diseases (e.g. non-allergic rhinitis), neurological diseases (e.g. Alzheimer's diseases), measles), gastrointestinal disorders (e.g. infections diseases (e.g. non-allergic rhinitis), cardiome), HIV (human immunodeficiency virus) infection and wound healing. Nucleic acids encoding albumin fusion protein is used for engineering the Xho and Cla I restriction sites into the fusion leader sequence 1sts for of the DNA encoding the HA protein in pPPC0006 plasmid.

Chote: This sequence SPQ.ID.No.20 is stated to be similar to the sequence shown in the sequence listing. However this sequence contains an additional base (C. at the 3 end which is absent in
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          ó

(GEST) GENSET

New nucleic acid that is a 5' expressed sequence tag (5' EST) for obtaining cDNAs and genomic DNAs that correspond to 5'ESTs and for diagnostic, forensic, gene therapy and chromosome mapping procedures Dumas Milne Edwards J, Duclert A, Giordano J; WPI; 2000-500381/45.

Claim 1; SEQ ID 35859; 71pp + CD-ROM; English

The present sequence is one of a large number of 5' ESTS derived from mRNAs encoding secreted proteins. No ORF has yet been conclusively identified within the present sequence. The 5' ESTS were prepared from total human RNAs or polyA+ RNAs derived from 30 different tissues. EST sequences usually correspond mainly to the 3' untranslated region (UTR) of the mRNA because they are often obtained from oligo-dT primed cDNA libraries. Such ESTS are not well suited for isolating cDNA sequences derived from the 5' ends of mRNAs and even in those cases where longer CDNA sequences have been obtained, the full 5' UTR is rarely included. Se ESTS are derived from mRNAs with intext 5' ends and can therefore be used to obtain full length cDNAs and genomic DNAs. 5' ESTS are also used in diagnostic, forensic, gene therapy and chromosome mapping procedures. expression and secretion vectors.

The present invention describes plant polynucleotides encoding polypeptides involved in the production and modification of isoprenoids, such as terpenoid and steroid compounds. The polynucleotides are used in genome mapping, in physical mapping and in positional cloning of an including containing and in positional cloning of agriculture for manipulation of isoprenoid metabolism, in medicine for therapeutic effects, including direct application in diseased organisms or indirect application by transgenic organisms and in fermentation and chemical processing industries involving isoprenoids. In plant capplications, manipulating isoprenoid pathways or isoprenoid composition may, for example, affect plant development, pest resistance, and the value of extractives (e.g. pinene and myrcene). The ubiquitous and contained roles of isoprenoids make the polynucleotides attractive targets for biotechnical applications in a variety of fields. AAA69527 to AAA69690 and AAB18004 to AAB18143 represent Eucalyptus grandis and Pinus contained the advance of the contained and proteins used in the exemplification of the invention present

antidiabetic; hypotensive; dermatological; immunosippressive; antiinflammatory; antibacterial; antiviral; antifungal; antirheumatic; antithyroid; and antianaemic. The sequences can be used for determining the presence of or predisposition to, or preventing or treating pathological conditions associated with an ORRX-associated disorder. The nucleic acids can be used to express ORRX proteins in gene therapy vectors. The proteins and nucleic acids may be used to treat cancers,

The present sequence is one of a large number of 5' ESTs derived from mRNAs encoding secreted proteins. No ORF has yet been conclusively identified within the present sequence. The 5' ESTs were prepared from total human RNAs or polyA+ RNAs derived from 30 different tissues. EST sequences usually correspond mainly to the 3' untranslated region (UTR) of the mRNA because they are often obtained from oligo-dT primed cDNA libraries. Such ESTs are not well suited for isolating cDNA sequences dare been obtained, the full 5' UTR is rarely included. S' ESTs are derived from mRNAs with intact 5' ends and can therefore be used to obtain full length cDNAs and genomic DNAs. 5' ESTs are also used
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               in diagnostic, forensic, gene therapy and chromosome mapping procedures.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             The present sequence is one of a large number of 5' ESTS derived from mRNAs encoding secreted proteins. No ORF has yet been conclusively identified within the present sequence. The 5' ESTS were prepared from total human RNAs or polyA+ RNAS derived from 30 different tissues. EST sequences usually correspond mainly to the 3' untranslated region (UTR) of the mRNA because they are often obtained from oligo-dT primed cDNA ilbraries. Such ESTs are not well suited for isolating cDNA sequences derived from the 5' ends of mRNAs and even in those cases where longer CDNA sequences have been obtained, the full 5' UTR is rarely included. S' ESTS are derived from mRNAs with intext 5' ends and can therefore be used to obtain full length CDNAs and genomic DNAs: 5' ESTS are also used in diagnostic, forensic, gene therapy and chromosome mapping procedures.
                                                                                                                                                                                                                                                                                                                                                           Human; 5' EST; expressed sequence tag; secreted protein; cDNA isolation; gene therapy; chromosome mapping; ss.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                New nucleic acid that is a 5' expressed sequence tag (5' EST) for obtaining cDNAs and genomic DNAs that correspond to 5'ESTs and for diagnostic, forensic, gene therapy and chromosome mapping procedures

A plasmid containing the DNA sequence of PEPCase can be introduced into a monocotyledonous plant to enhance PEPCase activity. The transformed plant has a high ability to fix carbon dioxide under dry conditions. It can also increase corn productivity when introduced into a corn plant.

This sequence encodes a human secreted protein of the invention. The extended cDNAs (or genomic DNAs obtainable from them) may be used to prepare PCR primers and probes. These are useful for forensic matching or positive identification by DNA sequencing. They may also be used in alternative fingerprint identification techniques. Antibodies against the proteins encoded by the extended cDNAs are useful in identification of tissue types or cell species, as well as identifying tissue specific soluble proteins. The sequences can be used for chromosome mapping and identification of genes associated with hereditary diseases or drug
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                response. signal sequences from the construction of secretion vectors. Other sequences derived from the extended cDNAs can be used to clone upstream genomic DNA sequences including promoters. This is in turn useful for identifying proteins that interact with promoter sequences. Some of the proteins may be useful in diagnosing and treating several disorders including, but not limited to: cancer, hyperlipidaemia, cardiovascular and neurodegenerative disorders, autoimmune diseases, and
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               rheumatic diseases, embryogenic disorders, hypertension, renal injury, amino acidurias, hypoglycaemia, male rat infertility and myopathies.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Murine 7-transmembrane G-protein coupled receptor coding sequence #18.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Gaps

7-transmembrane G-protein coupled protein receptors (TTM-GPCRs). The present sequence is one such murine 7TM-GPCR coding sequence. The present sequence was derived from hematopoietic stem cells. The present sequence and its corresponding protein are useful in the prevention, diagnosis and treatment of diseases associated with inappropriate 7TM-GPCR expression. TYM-GPCRs identify specific signalling molecules, to activate an effector-signalling cascade that triggers an intracellular response and eventually a biological effect.
                                                                                                                                                                                                                                                                                              DNA Sequences encoding 7-transmembrane G-protein coupled protein receptors characteristic of hematopoietic stem cells, useful for
